## Κανόνες Γραμματικής

Οι κανόνες της γραμματικής μας έχουν δοθεί στο εργαστήριο, αυτούς πρέπει να εφαρμόσουμε στην εργασία #2 με την μέθοδο της αναδρομικής κατάβασης. Αυτή η γραμματική δέχεται συμβολοσειρές με bits (0,1) και λογικές πράξεις. Η σειρά προτεραιότητας των τελεστών πράξεων σε επίπεδο bits είναι από την υψηλότερη προς την χαμηλότερη δηλαδή and, or , xor.

Γι' αυτό αναγκάστηκα πρέπει να έχουμε 3 επίπεδα κανόνων. Το and στο term\_tail, το or στο factor\_tail, και τέλος το xor στο atom\_tail για να κρατήσουμε την σειρά προτεραιότητας.

## Έλεγχος LL(1) για συμβατότητα για την γραμματική

Grammar	
Stmt_list →	Stmt Stmt_list   .
Stmt →	id equal Exp   print Exp.
Exp →	Term Term_tail.
Term_tail →	xor Term Term_tail   .
Term →	Factor Factor_tail.
Factor_tail →	or Factor Factor_tail   .
Factor →	Atom Atom_tail.
Atom_tail →	and Atom Atom_tail   .
Atom →	lparen Exp rparen   id   num.

Some sentences generated by this grammar: {ε, print id, print num, id equal id, id equal num, print id and id, print id and num, print num and id, print num and num, id equal id and id, id equal num and id, id equal id and num, id equal num and num, id equal id and id and id, id equal id and id and num, id equal id and num and id, id equal num and id and id, id equal id and num and num, id equal num and id and num, id equal num and num and id}

- All nonterminals are reachable and realizable.
- The nullable nonterminals are: Stmt\_list Term\_tail Factor\_tail Atom\_tail.
- The endable nonterminals are: Atom\_tail Atom Factor\_tail Factor Term\_tail Term Exp Stmt\_list Stmt.
- No cycles.

## Αποτελέσματα Ελέγχου

nonterminal	first set	follow set	nullable	endable
Stmt_list	id print	$\emptyset$	yes	yes
Stmt	id print	id print	no	yes
Term_tail	xor	rparen id print	yes	yes
Term	lparen id num	rparen xor id print	no	yes
Factor_tail	or	rparen xor id print	yes	yes
Factor	lparen id num	rparen or xor id print	no	yes
Atom_tail	and	rparen or xor id print	yes	yes
Atom	lparen id num	rparen and or xor id print	no	yes
Exp	lparen id num	rparen id print	no	yes

The grammar is LL(1).

## Αποτελέσματα εξόδου

- 1) Έγκυρη μορφή εισόδου - εκτέλεση runner.py

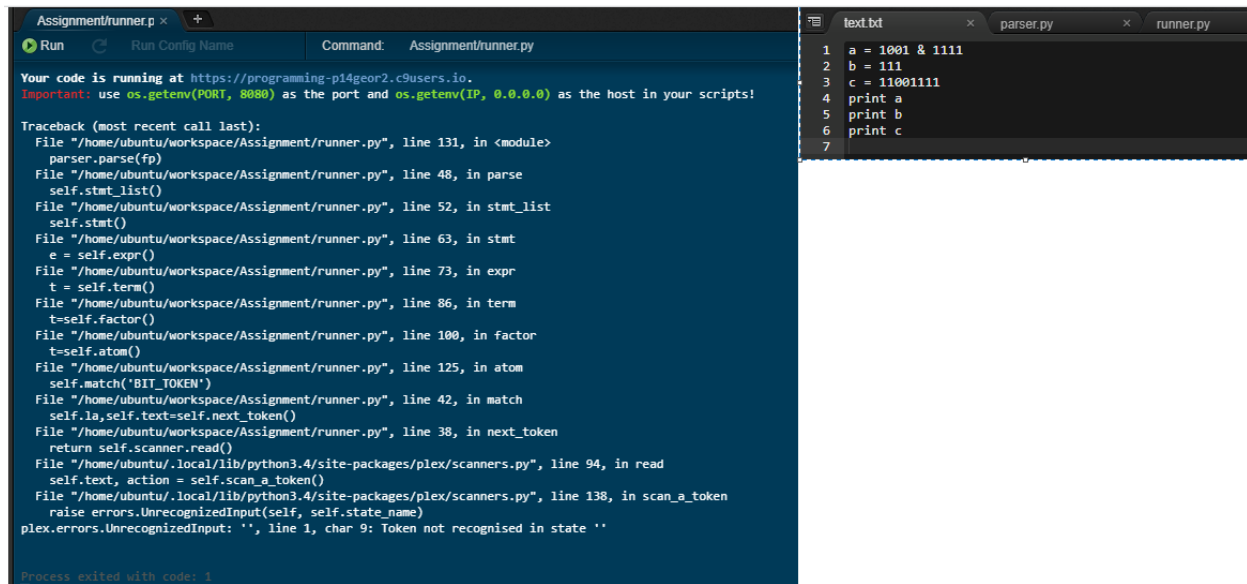

The image shows a code editor with three tabs: 'text.txt', 'parser.py', and 'runner.py'. The 'text.txt' tab is active, displaying the following code:

```
1 a = 1001 or 1111
2 b = 111
3 c = 11001111 xor 01110001
4 print a
5 print b
6 print c
7 print (10001 and 111000 or 011111)
```

Below the code editor is a terminal window titled 'Assignment/runner.p x'. It shows the output of the script:

```
Run Run Config Name Command: A
Your code is running at https://programming-p14geor2.c9u
Important: use os.getenv(PORT, 8080) as the port and os.
1111
111
10111110
11111
Process exited with code: 0
```

## 2) Άκυρη μορφή εισόδου - εκτέλεση runner.py

The image shows a Python IDE with two windows. The left window, titled 'Assignment/runner.py', displays a traceback error. The right window, titled 'text.txt', contains a small Python script.

**runner.py Traceback:**

```
Traceback (most recent call last):
  File "/home/ubuntu/workspace/Assignment/runner.py", line 131, in <module>
    parser.parse(fp)
  File "/home/ubuntu/workspace/Assignment/runner.py", line 48, in parse
